

*Marketing automation
towards artificial intelligence and hyperpersonalization*
Grzegorz Błażewicz

Introduction 11

Marketing autoMation philosophy 13

1. Marketer's new challenges 15

- Mobile first 18
- An even newer consumer 21
- Hyper-personalization 24
- GDPR and user tracking 26
- The end of the cookie era 29
- Transparency in data collection 30

2. Two revolutions in marketing 31

- Processes and codification of knowledge 32
- Big Data, machine learning and artificial intelligence 34

3. Who are we and why was this book written? 37

4. Artist's shit – excuse my language, but it actually happened 39

Part I Revolution 1.0 a few words about the codification of processes in Marketing 41

5. From sales funnel automation to AI – the story of automation platforms 43

- Automation in B2B and B2C 43
- When everyone follows #marketingautomation 46
- Focus on customer data 47
- Marketing Automation versus Customer Data Platform 50

6. The most important functions of the Marketing Automation system, namely the foundations of Revolution 1.0 56

- Anonymous identification and 360-degree profiles 56
- Automatic contact segmentation 60
- Events, conditions, actions 64
- Single channel, multi-channel, omnichannel 66
- 1-1 personalization and dynamic content 68
- A smarter outbound 69
- Cross-channel analytics 72

7. Marketing automation: facts and myths 75

- Marketing automation is an area exclusively for marketers 75
- Marketing Automation is just software 77
- You don't have a customer base – automation is the best solution 78
- Marketing Automation is only for the largest companies 80
- If you want a good implementation, hire an agency 82

Part II Revolution 2.0 how big data shapes Marketing 85

8. Taming Big Data 87

The 7 Vs of Big Data	89
The modern Big Data market	92
Big Data trends	94
9. Why does Google know better? And doesn't it know too much?	97
10. Information chaos	100
11. Correlation instead of causality	102
12. Everything is data	106
13. The algorithm will choose a series and compose a playlist for you	108
14. Data as company capital	111
15. The use of Big Data in marketing	114
How it's working? How is the data collected?	115
What data can I collect and what should I collect?	119
Data ethics	121
Part III Artificial intelligence in mArketing	123
16. A brief history of algorithms and machine learning	125
17. Machine learning or artificial intelligence	127
18. What artificial intelligence can do	129
19. What artificial intelligence cannot do and will it be able to do?	132
20. Should we be afraid of artificial intelligence?	136
21. Types of machine learning algorithms and their application in marketing	138
Collaborative filtering	139
Neural networks	142
Deep learning	143
Regression algorithms	145
Decision trees	146
22. Artificial intelligence in marketing	147
Chatbots	148
Better, personalized search results	149
Virtual assistant	151
Automated e-mail	153
Database segmentation	155
Welcome and birthday coupons	156
Push notifications	158
Product recommendations	160
Video Body Language Monitoring	161
23. Machine learning limitations	164
Part IV A new way of Marketing technologies	165
24. Personalization versus hyper-personalization	167
25. A new approach to measuring efficiency in e-commerce	171
26. Deep Behavioral Profiling	173
27. How to build an offer based on data that is not yet available	175
28. Marketing based on artificial intelligence predictions	177
Prediction of the customer's life value	178

Purchase prediction 180

Churn prediction 181

Prediction of the optimal time and communication channel 183

Bibliography 185
